- 1. Read this manual carefully before installing or servicing this equipment.
- This equipment is designed for paint drying applications. Adjust to the correct temperature and check minimum safe distance from heat source when using. Improper use can cause paint surface damage.
- 3. Installation and servicing must be performed by a qualified technician or service agency.
- 4. The system has been designed for easy installation, low operating cost and minimum maintenance. The warranty does not cover lamp tube defects resulting from misuse or improper operation.
- 5. Disconnect power source when the equipment is not in use for a long period.
- 6. The lamp tube should not be perpendicular to the ground when the equipment is in operation. Otherwise, it will shorten the service life of the lamp tube.

2. Specifications

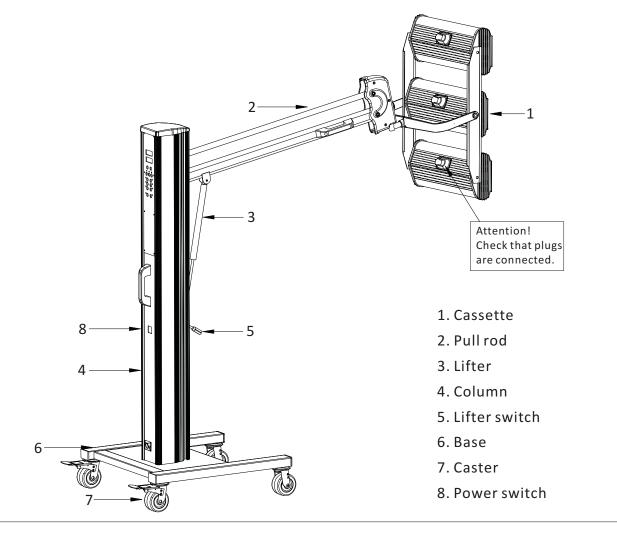

Model	FY-3AT	
Input Power Source	Single Phase 220V 50/60Hz	
Input Power (W)	3×1000	
Curing Area (mm)	1200 × 1000	
Time Setting	0-99mins Adjustable	
Light Intensity (%)	10 - 100	

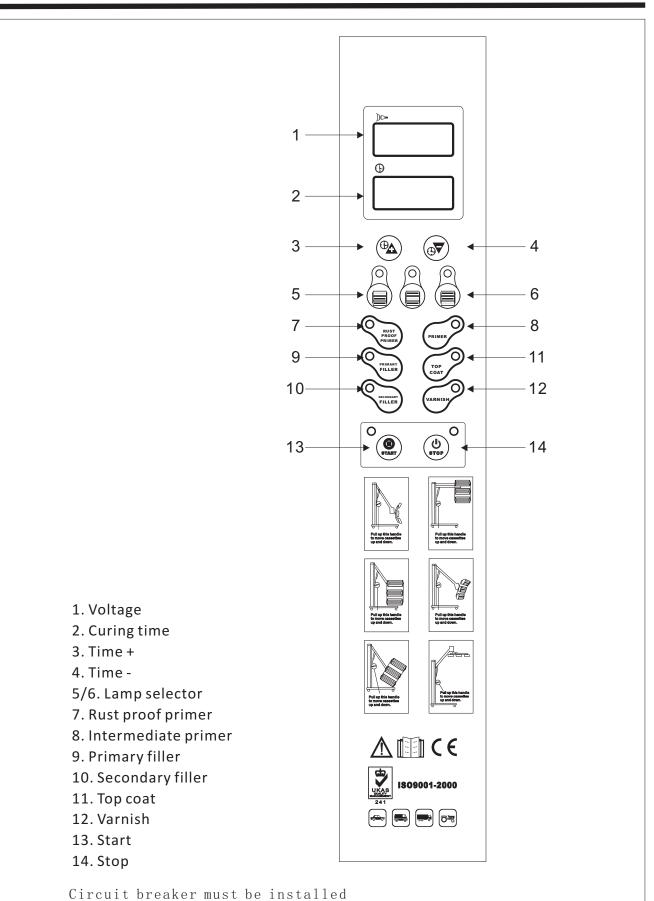

Suggested Curing Times

Rust proof primer	4 - 8 mins
Intermediate primer	2 - 3 mins
Primary filler	5 - 8 mins
Secondary filler	3 - 6 mins
Top coat	6 - 10 mins
Varnish	5 - 10 mins

The shortwave infrared curing lamp is divided into 3 parts (a base, a column and a cassette).

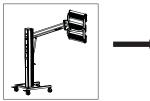

- 1) Installation of the base.
- a. Open the packing of the base.
- b. Install the four wheels on the base respectively and tighten up the screws. Usually, the wheels with brakes should be mounted on the rear of the base.
- 2) Installation of the column.
- a. Open the packing of the column.
- b. Put the column vertically on the top of the base, directly engage the screw holes and tighten up using the screws.
- c. Connect the support arm with the column for supporting cassette.
- d. Connect the lifter with the column to control the up and down movement of cassette.
- 3) Installation of the cassette.
- a. Open the packing of the cassette with care.
- b. Connect cassette with support arm and tighten up with the screws.
- c. Connect control wires and adjust the angle of cassette.

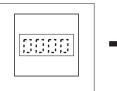

4. Controls

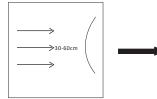

- Connection of electrical supply. Make sure that the supply cable is at least 4mm² at 220V. Note: Make sure that the facility supply voltage and frequency are the same as shown on the equipment name plate.
- 2. Connect to power supply of AC 220V. Switch on the equipment. The LED display will show the normal voltage as 220V.
- 3. Set time according to the requirements of the paint to achieve the best curing result.
- 4. Adjust the distance from heat source to paint surface. (Usually, keeping a distance of 45cm from the paint surface is best.)
- 5. Protect the lamp against shocks and vibrations especially when it is cold.
- 6. During the curing process, the paint surface must be clean, without water and impurities.
- 7. Preferably do not touch quartz with bare hands. If grease or chemical compounds are deposited on the quartz, simply clean with a cloth moistened with alcohol.

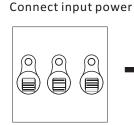

Install machine

Data is displayed on screen

Keep heat source parallel to the paint surface a distance of 30-60cm

Lamp selector

Switch off

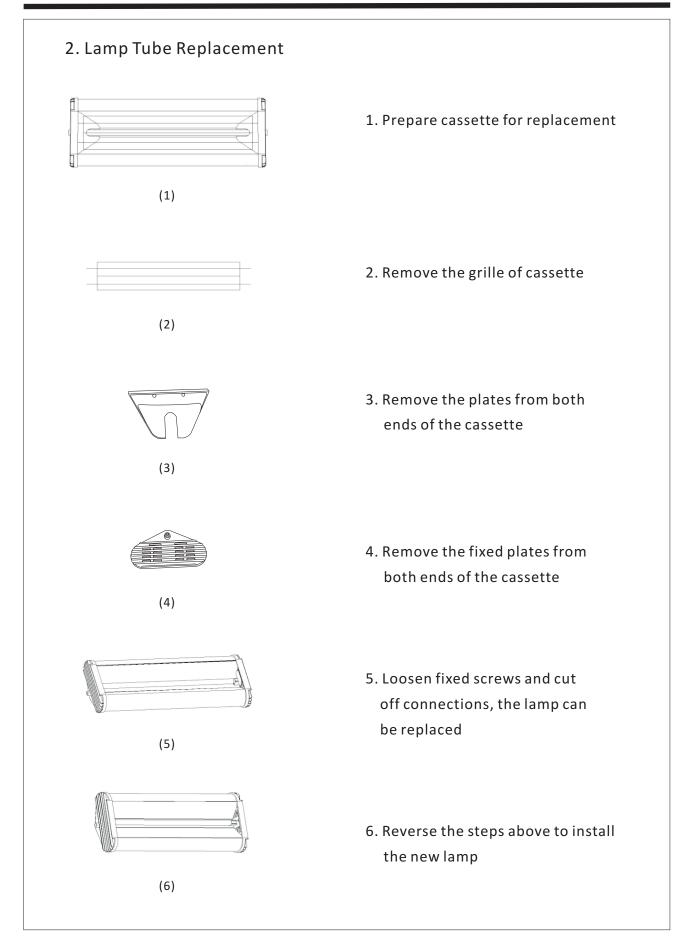

Switch on

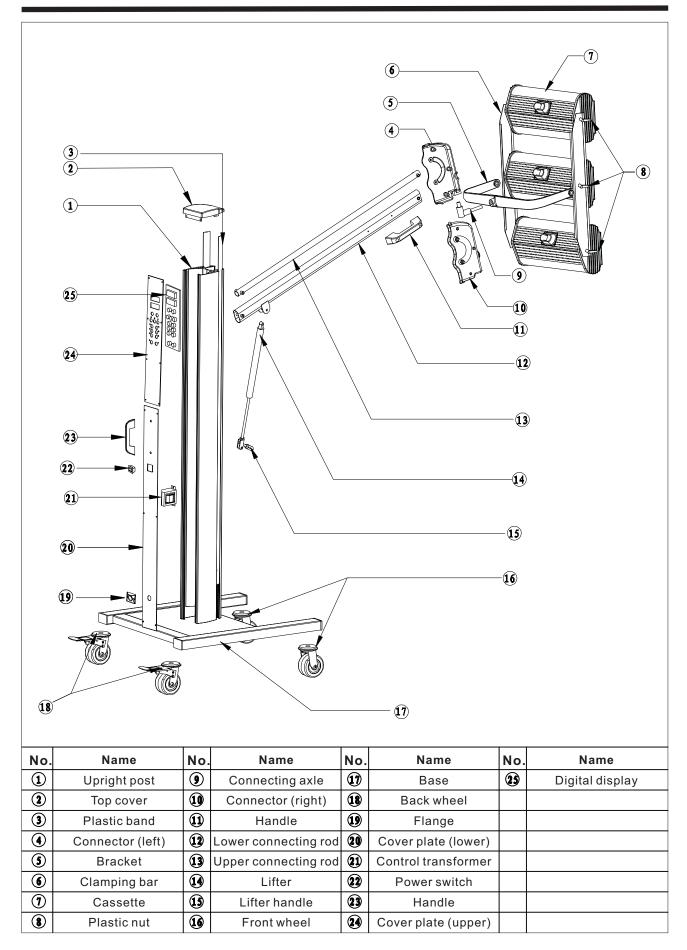

Choose paint layer requirement

1. Troubleshooting

PROBLEM	CAUSE	SOLUTION
Light tube does not work	a. Light tube damaged b. Lamp is not plugged in	a. Check light tube b. Check the connections
Digital display is blank or is incomplete	a. Unplugged flat wire in circuit board b. Digital display damaged	a. Check flat wire b. Check digital display
Time cannot be adjusted	a. Switch imbalance b. Key board has exclusion	a. Check the installation of switch b. Check keyboard exclusion
